

# NEW 100MB HIGH SPEED DATA LINE MEANS FASTER CONNECTIONS

## Why is iBAHN upgrading the data line in the Hilton London Metropole?

**Internet usage among our guests has doubled in the last year, but the need for bandwidth has quadrupled!**

This is due to the increase downloading large email attachments and the use of applications such as iTunes, Bit Torrent, Slingbox, Google Talk and Skype. To meet the change in demands iBAHN has installed the largest available line to this hotel to maintain our high speed services. The line upgrade will also facilitate high grade Video Conference's , Webcasting and other bandwidth intensive conference services.

In addition to addressing the demand for bandwidth iBAHN continues to provide the highest levels of security:

- A patented end-to-end managed network that insulates each layer - the guest, your hotel, and the Internet
- The only VPN certification program, supporting more than 500 corporate IT departments
- Wi-Fi Protected Access, an exclusive offering that encrypts traffic across the airlink, locking down security for wireless users
- Continuous proactive monitoring of the network to identify infected traffic before it can bring down the hotel network

**As leaders in wired and wireless connectivity for the hospitality industry, iBAHN continues to invest in research and development and the infrastructure of our network to ensure that you benefit from new technologies without them slowing you down.**
